

SEVENOAKS SYNTHESIS #1

Stage 1

1. Weigh out 0.500 g aminothiazole
2. Dissolve with 10 cm³ THF in a vessel
3. Cool it using an ice bath
4. While there, add 0.15 cm³ Iodomethane (micro)dropwise; very slowly
5. Put in a stopper (prevent evaporation) and place in fridge.

①

②

③

Stage 2

1. Cross fingers
2. Mix with a -pyrodine

Stage 3

1. Move to separating funnel
2. Add salt water and mix well; allow to separate
3. Tap off the aqueous solution and the organic solution into separate vessels
